

Fitted with safety valve to prevent overloading allows up to 50% over rated capacity.

The base, pressure cylinder and oil reservoir form one integral part to provide

greater strength and safety. Will withstand tilting of load as piston does not have contact with the cylinder. Can be used in vertical or horizontal position (in horizontal position the handle

and pump must be positioned below cylinder as in illustration). 3 pc. Zinc coated handle for easy storage. Repairable. Repair kits available. Carry handle on units MG-20 - MG-50.
